

Our mission is to help keep fleet drivers, workers on the ground, and the public free from harm.

PreView® VideoLink

PreView VideoLink incorporates our rugged Pre-View Radar to your existing camera/monitor system. The combined system offers an audible and visual "tap on the shoulder" that something has appeared in the equipment's blind spot. VideoLink allows you to upgrade your legacy vision system to the latest collision avoidance technology, while achieving a comprehensive safety solution for your fleet.

Engineering and manufacturing heavy-duty blind spot safety solutions for over 70 years.

REDUCE

Reduces additional costs by interfacing with your existing camera/monitor system to create a comprehensive, active safety solution.

TRANSFORM

Transforms your existing vision system into an active safety solution by providing the link between radar and vision. Drivers receive audible and visual alerts, warning them when an object is detected.

SIMPLIFY

Superimposes directional and distance indicators on the existing monitor so your drivers know where the object in their path is located.

About Us

PRECO Electronics has been making heavy-duty industries safer for over 70 years. We design, engineer, and manufacture the most rugged collision avoidance technology in the industry. We are committed to helping you find the right safety solution for your unique needs.

HOW IT WORKS

- VideoLink connects PreView Radar to an existing camera/monitor system providing an alert overlay on the monitor to visually warn the operator when an object has been detected.
- When PreView Radar detects a person or object, the operator will receive a visual and audible alert.
