

Our mission is to help keep fleet drivers, workers on the ground, and the public free from harm.

PreView WorkSight®

PreView WorkSight provides the same level of coverage whether you're on a busy worksite or on the roadways. With its dual antennas, WorkSight can provide close to the bumper coverage while simultaneously detecting objects as far away as 20ft/6M.

Engineering and manufacturing heavy-duty blind spot safety solutions for over 70 years.

UNIQUE DETECTION PATTERN

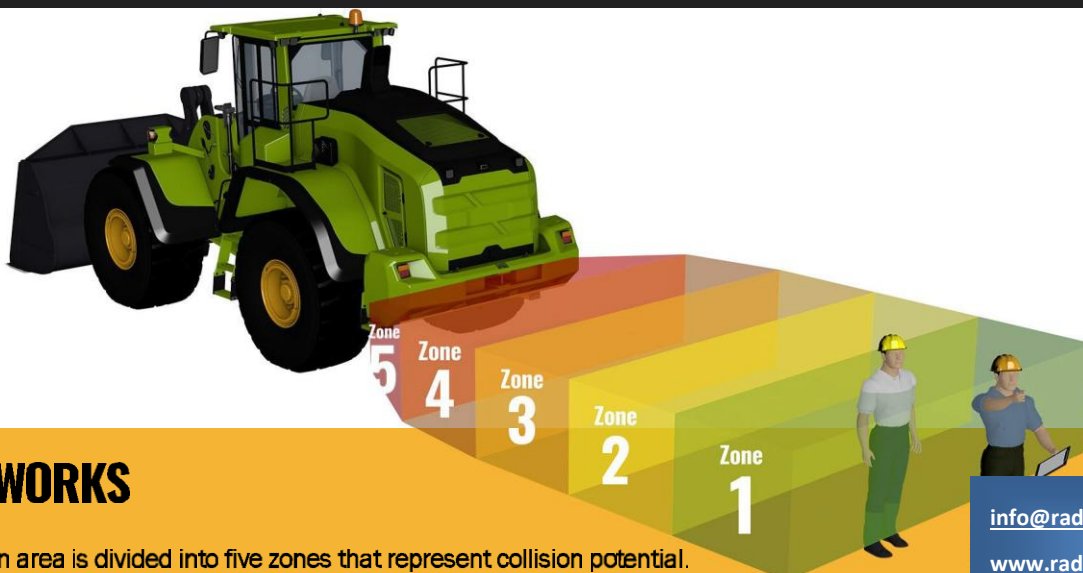

PreView WorkSight has a unique bell shaped detection pattern. This ensures that you have the coverage you need directly behind your bumper and gets wider farther out to aid in backing maneuvers.

COMPLETE COVERAGE

WorkSight is equipped with dual antennas. While one antenna is providing close-to-the-bumper coverage, the other antenna is busy detecting objects farther away giving your operators complete blind spot protection.

WIRELESS OPTION

WorkSight is available in a wireless option. By eliminating the body harness, WorkSight Wireless reduces installation time by up to 60%.

LED Display

HOW IT WORKS

- The detection area is divided into five zones that represent collision potential.
- If a person or object is detected in any of the zones, WorkSight sends a message to the display.
- The display gives a zone appropriate audible and visual alert to warn the operator.
